

Practical 2

Flask Web Application Practical

Subject: Cloud Computing

Aim

To create and run a simple web application using Flask.

Program Code

```
from flask import Flask

app = Flask(__name__)

@app.route('/')
def home():
    return "Hello Everyone"

if __name__ == '__main__':
    app.run(debug=True)
```

Code Explanation

Line	Explanation
from flask import Flask	Imports Flask module
app = Flask(__name__)	Creates Flask application
@app.route('/') def home():	Defines home URL
return "Hello Everyone"	Function executed on homepage
app.run(debug=True)	Displays output
	Starts server in debug mode

Steps to Execute Practical

Step 1: Install Python

Download and install Python:

[Python Official Website](https://www.python.org/)

During installation:

✓ Check:

Add Python to PATH

Step 2: Install Flask

Open:

Command Prompt

Run command:

```
pip install flask
```

Step 3: Create Python File

Create file:

```
app.py
```

Paste Flask code.

Step 4: Run Application

Open terminal in project folder.

Run:

```
python app.py
```

Step 5: Output

Terminal shows:

```
Running on http://127.0.0.1:5000/
```

Open browser:

```
http://127.0.0.1:5000/
```

Final Output

```
Hello Everyone
```

Practical 3

Salesforce Practical: Create Application Using Apex Programming

Subject: Cloud Computing – Salesforce Apex Programming

Aim

To create an application in Salesforce using **Apex Programming Language** and **Visualforce Page**.

Step 1: Create Salesforce Developer Account

Open:

[Salesforce Developer Signup](#)

Fill:

- Name
- Email
- Username
- Company

Then verify email.

Step 2: Login to Salesforce

Open:

[Salesforce Login](#)

Login with:

- Username
 - Password
-

Step 3: Open Developer Console

Steps:

Profile Icon

Developer Console

This opens coding environment.

Step 4: Create Apex Class**Steps:**

File

New

Apex Class

Class Name:CreateAccount

Step 5: Paste Apex Code**Apex Class Code (Short & Updated)**

```
public class CreateAccount {  
  
    public String accName {get; set;}  
    public String phone {get; set;}  
    public String website {get; set;}  
  
    public PageReference saveAccount() {  
  
        Account acc = new Account(  
            Name = accName,  
            Phone = phone,  
            Website = website  
        );  
  
        insert acc;  
  
        PageReference pg = new PageReference('/' + acc.Id);  
        pg.setRedirect(true);  
        return pg;  
    }  
}
```

Save using:Ctrl + S

Step 6: Create Visualforce Page**Steps:**

File

New

Visualforce Page

Page Name:

CreateAccountPage

Step 7: Paste Visualforce Code

Visualforce Page Code (Short Version)

```
<apex:page controller="CreateAccount">

    <apex:form>

        <apex:pageBlock title="Create Account">

            <apex:pageBlockSection columns="1">

                <apex:inputText value="{!accName}" label="Account Name"/>

                <apex:inputText value="{!phone}" label="Phone"/>

                <apex:inputText value="{!website}" label="Website"/>

            </apex:pageBlockSection>

            <apex:pageBlockButtons>

                <apex:commandButton value="Save"
                    action="{!saveAccount}"/>

            </apex:pageBlockButtons>

        </apex:pageBlock>

    </apex:form>

</apex:page>
```

Save file.

Step 8: Run the Application

Steps:

Preview

Open Visualforce Page

OR

Open from browser:

<https://yourdomain.visualforce.com/apex/CreateAccountPage>

Step 9: Enter Details

Example:

Account Name : ABC Company

Phone : 9876543210

Website : www.abc.com

Click:

Save

Step 10: Output

After saving:

- Account record gets created
- Salesforce opens created Account page

Practical 4

Salesforce Mini Project Practical Execution Steps (Latest Salesforce UI)

Title: Design and Develop Custom Application using Salesforce Cloud

Using Salesforce Lightning Experience

Aim

To design and develop a custom application using Salesforce Cloud.

Step 1: Login to Salesforce

Open:

[Salesforce Login](#)

Login using:

- Username
 - Password
-

Step 2: Open Lightning Experience

After login:

Profile Icon

Switch to Lightning Experience

Step 3: Open Setup

Steps:

Gear Icon ⚙

Setup

Step 4: Create Custom Object

Steps:

Object Manager

Create

Custom Object

Step 5: Fill Object Details

Enter Details

Field	Value
Label	Comment
Plural Label	Comments
Record Name	Comment Name
Data Type	Text

Enable:

✓ Allow Reports

Click:

Save

Step 6: Create Custom Tab

Steps:

Quick Search

Tabs

Custom Object Tabs

New

Step 7: Select Object

Choose:

Object = Comment

Choose any tab icon.

Click:

Next → Next → Save

Step 8: Create Custom App**Steps:**

Quick Search

App Manager

New Lightning App

Step 9: Enter App Details

Field	Value
-------	-------

App Name	Comment Box App
----------	-----------------

Click:

Next

Step 10: Add Navigation Items

Add:

- Contacts
- Comments

Move them to selected items.

Click:

Next

Step 11: Assign Profiles

Select:

System Administrator

Move to selected profiles.

Click:

Save & Finish

Step 12: Open the Application**Steps:**

App Launcher

Comment Box App

Your custom app opens.

Step 13: Create New Comment Record

Steps:

Comments Tab

New

Enter:

Comment Name

Click:

Save
